Non-Preferred medications are in a higher copay tier under the pharmacy program. Highlighted in gray on the next page is a listing of all of the Non-Preferred Medications that may be covered under the pharmacy program. There are therapeutically Preferred alternatives available to the right of the Non-Preferred section highlighted in white. The Preferred alternatives have the lowest copayment under the pharmacy program. If you are utilizing a Non-Preferred medication you may want to speak with your physician to determine if there is an alternative therapy that provides the same therapeutic efficacy, but is available at a lower cost to you. This document may be shared with your physician to evaluate potential preferred therapy options.

## Frequently Asked Questions About Generic Medications

### What is a generic drug?

A generic drug is a lower cost version of a brand name medication. They are just as safe and effective as the brand name, but they are more affordable.

### How are generic drugs different from brand name drugs?

The biggest difference between a generic and brand name drug is the price. Most generics cost 70-90% less than the brand name version. Generics drugs may also have a different shape, color or package but these differences only affect how the medicine looks, not how it works.

### Are generics really the same as the brand name?

Yes. Generic drugs have the same medicine as the brand name, and the FDA will not approve them unless they are just as safe and effective as the brand name drug. There are a few special medical conditions where a generic drug might have a small difference in how it works, but that is very rare.

### How many people use generic drugs?

Millions of people use generic drugs every day. In fact, about 3 out of 4 prescriptions are for generic drugs, but there are still many people taking expensive brand name drugs who could save a lot of money by switching to the generic version.

### Do generic drugs cause more side effects than brand name drugs?

No. Brand name drugs and a generic drug have the same rates of side effects. Each medication can affect each person in a different way. If your medicine has side effects that you are worried about, call your doctor.

- All MULTISOURCE medications (DAW) (brand name medications that have an EXACT generic equivalent) are subject to the 4th Tier Enhanced Non-Preferred copay (not all MULTISOURCE medications are listed on this formulary)
- All forms (oral, liquid, topical...) and dosages (DR, ER, LA, XR....) of the medications listed are classified as Non-Preferred
- This formulary is subject to change at any time without notice
